DPI has been leading the Road Marking industry in the product innovation, quality, value and service. We have strived very hard to be at the forefront of development and quality assurance that is why we are proud to have been approved with NATA certification recently. Most of DPI thermoplastic products undergo extensive testing to make sure that DPI Products not only meet but exceed the Australian Standard. With our new in-house technical team, we can also tailor the material to your requirements and price point and back it up with the technical reporting and data analysis.

DPI has been at the forefront for over a decade of the constant development DPI AUMAX RPM's. DPI AUMAX RPM markers have been applied all over Australia. With some tried and tested materials, DPI AUMAX RPMs have been proven to be very strong due the sealed epoxy interior and special coating on the reflective lens. They also maintain a longer and stronger reflection as water cannot get inside the lens, giving the applicators and the road users piece of mind that they will enjoy a safer journey in wet weather condition also. Raised Pavement Markers are available in a range of standard colours and reflector combinations, red, white, yellow and blue – one and two way reflectors.
